GENERAL NOTES

1. This synthetic drawing is for AI extraction testing only.
2. Electrical symbols on F-101 are mapped to the predefined BOM library.
3. Quantities must be derived from CV detections, not from LLM inference.
4. Room names are included to support room-wise BOM grouping.
5. Coordinates are page-local pixels in the ground-truth JSON.
6. RAG should return the closest library item for every detected symbol.
7. The wizard should route F-201 to measurement extraction and F-101 to electrical BOM.
